

國立中山大學應用數學系

學術演講

講者：陳培君教授（國家衛生研究院高齡醫學暨健康福祉研究中心）

講題：多元運用健康資料於心血管疾病流行病學研究

時間：2024/05/02 (Tuesday) 14:10~15:00

地點：理 SC 4009-1 教室

茶會：13:45

Google Meet Link: <https://meet.google.com/evg-ukyx-opd>

Abstract

In the field of epidemiological and healthcare research, conducting traditional long-term follow-up study has become increasingly challenging due to limited research resources and declining participant recruitment rates. Conversely, health-related databases generated during government administrative processes or routine healthcare activities have emerged as effective research resources, offering major advantages such as relatively low cost, enhanced availability, and broad generalizability. With appropriate study design, data management, and analysis, these databases can support diverse research applications. I will share with the audience my experience in cardiovascular disease research using various data sources such as electronic health records and insurance claims data, as well as the pitfalls and challenges of using different databases for research.
