學術演講

講者：顏佐榕 教授

中央研究院統計科學研究所

講題：An attention algorithm for solving large scale structured l_0 -norm penalized estimation problems

時間：2019/11/13 (Wednesday) 14:10 ~ 15:00

地點：理學院四樓理 SC 4009-1 室

茶會：15:00 於理 SC 4010 室 (系辦公室)

Abstract

Technology advances have enabled researchers to collect large amounts of data with lots of covariates. Because of the high volume (large n) and high variety (large p) properties, model estimation with such kind of big data has posed great challenges for statisticians. In this paper we focus on the algorithmic aspect of these challenges. We propose a numerical procedure for solving large scale regression estimation problems involving a structured l_0 -norm penalty function. This numerical procedure blends the ideas of randomization, blockwise coordinate descent algorithms, and a closed form representation of the proximal operator of the structured l_0 -norm penalty function. In particular, it adopts an “attention” mechanism that exploits the residual errors to build a sampling distribution for picking up regression coefficients for updates. Simulation study shows the proposed

numerical procedure is competitive to the benchmark algorithm for sparse estimation in terms of runtime and statistical accuracy when both the sample size and the number of covariates become large.

Keywords: Blockwise coordinate descent algorithms,
nonconvex optimization, randomized algorithms.
